

Together, we'll see the brain in a new light.

Every word on this page, every colour and image sets off nerves in your brain. And there are 100,000,000,000 nerves in your brain. Nothing is more complex. It's why nothing is harder to solve than Schizophrenia. To find the answer, we'll have to put our heads together. If you have Schizophrenia, we need 4,000 volunteers to begin Australia's largest ever brain research project. By the end we'll have the clearest picture of the human brain we've ever seen and, hopefully, a cure.

Schizophrenia. Be part of the answer. Call 1800 639 295 or visit schizophreniaresearch.org.au
